

RAPIDSTORE

Automatic Shuttle Storage System for Glass Handling.

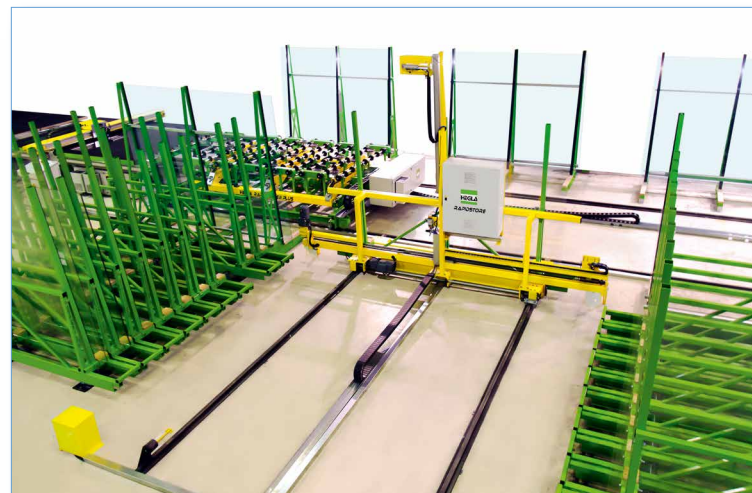

More Storage, More Types of Glass

With RAPIDSTORE, you can increase your glass storage and the number of types of glass accessible to your floor loading system.

The glass is held available in packages on space-saving storage frames. In accordance with the cutting plan, the shuttle collects a frame filled with one type of glass and transports it to a direct pick-up location for loading.

Following the type change, the remaining glass is transported back to storage by the shuttle. Either a new glass package is transported to the cutting line or alternatively the panes will be taken from a stationary rack.

RAPIDSTORE as a Complement to a Floor Loading System

- Ideal for expanding the number of storage locations accessible to the RAPIDLOADER floor loading system.
- Pragmatic solution for expanding the types of glass that can be loaded without manual handling.
- Simple, floor-mounted design.
- Depending on the fitting of optional equipment, the glass storage facility can be loaded without interrupting the cutting process.
- RAPIDSTORE is an optional part of the RAPIDLINE system cutting line, and can also easily be retrofitted in an expansion phase.

Example Layout of the RAPIDLINE System Cutting Line with RAPIDSTORE

Configuration / Options

- Number of storage positions can be freely selected
- Self-contained loading position which permits loading of the RAPIDSTORE during the cutting process
- Station with an additional removal point for the floor loading system

Technical Data

	Glass sizes:	Support depth:	Capacity:
RAPIDSTORE 3328	3.300 x 2.800 mm	120 and 210 mm	3 to.
RAPIDSTORE 3828	3.800 x 2.800 mm	120 and 210 mm	3 to.
RAPIDSTORE 6133	6.100 x 3.300 mm	160 and 210 mm	5,8 to.
